

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application:

Claims 1-12 (cancelled).

Claim 13 (original) A contactless reader/writer, characterized by comprising:

a movable media bearing member which is capable of bearing a plurality of contactless IC media each having a digital information recording region on the same plane at the same time;

a radio transceiver circuit having an antenna disposed at a specific position which is in parallel with said media bearing member; and

a displacement mechanism that displaces said media bearing member on said plane so that a specific one of said plurality of contactless IC media approaches said specific position;

wherein the digital information is received and transmitted between said specific contactless IC media and said antenna.

Claim 14 (original) A contactless reader/writer, characterized by comprising:

a media bearing member which is capable of bearing a plurality of contactless IC media each having a digital information recording region at the same time;

a read/write mechanism bearing member on which a media read/write mechanism including an antenna and a radio transceiver circuit is mounted; and

a displacement mechanism that displaces said read/write mechanism bearing member so that a specific one of said plurality of contactless IC media approaches said antenna;

wherein the digital information is received and transmitted with respect to said specific contactless IC media through said antenna.

Claim 15 (currently amended) The contactless reader/writer as claimed in claim 13 or 14, characterized in that said media bearing member includes a plate-shaped holder which is capable of bearing said plurality of contactless IC media at given intervals at the same time; and in that said displacement mechanism brings said specific contactless IC media in close contact with said antenna.

Claim 16 (currently amended) The contactless reader/writer as claimed in claim 8 13 or 14, characterized in that the same function as a function given to said contactless IC media is realized on the basis of the digital information recorded on said born contactless IC media.

Claim 17 (original) The contactless reader/writer as claimed in claim 16, characterized by further comprising information processing means for executing information processing on the basis of the digital information read through said control circuit; wherein the information processing result by said information processing means is recorded on said specific contactless IC media from which the digital information has been read.

Claim 18 (original) The contactless reader/writer as claimed in claim 16, characterized in that said contactless IC media is accommodated in a card medium used in an information processing device on which the card reader/writer is mounted.

Claims 19-30 (cancelled).
